

REPORTxtender

COMPLETE DOCUMENT DISTRIBUTION SYSTEM

Organizations have a need to provide information to their customers, partners or other third parties. In some cases, providing access via a Web connection may not be convenient, such as for subcontractors at a construction job site, or distribution of technical manuals to customers. In other cases, the third party will need to bring information into their own system for further use, such as a customer of an imaging or reporting service bureau. Finally, the end user may need to have a snapshot of the information at a particular moment in time, so access to live (possibly changing) data would be inappropriate.

ReportXtender™ (RX) meets the organizational and inter-organizational demand for the distribution of content to those individuals who need access to the information — especially when Web access is not possible, convenient or appropriate. In addition, ReportXtender facilitates information sharing between organizations by providing an optional mechanism to migrate content between instances of ApplicationXtender® (AX).

SIMPLE, INTUITIVE EXTRACTION WIZARD

- Ability to define criteria for AX content to be included on storage media
- Collects content in “staging area” for transfer to CD-ROM media
- Searchable index for content included on storage media
- Index and images can be placed on single CD-ROM media or span multiple media
- Independent of CD authoring hardware and software

CONTENT VIEWING

- Read-only viewing utility provides easy-to-use search and retrieval of content on CD-ROM media based on keywords
- Ensures that content can be retrieved on any Windows-based computer with CD-ROM drive
- Alternatively, view content of CD-ROM media using AX client

MIGRATE CONTENT FROM MEDIA TO APPLICATIONXTENDER

- Reintegration wizard to migrate content from an RX created CD-ROM to AX
- Share content between different instances of AX — facilitates data transfer and sharing between business partners, suppliers, vendors or other third parties
- Content can be used and managed directly in new instance of AX — just as though it was generated natively

FLEXIBLE LICENSING

- Purchase only the number of CDs you expect to create — expand later as needed
- Adding to the CD count is simple, electronic process — no need to wait for shipping of new software or hardware
- Flexibility to implement a self-contained, cost-effective content viewing solution

ReportXtender provides a complete content distribution mechanism for AX allowing organizations to distribute content via CD to third parties who may or may not have AX. By facilitating fast and secure information sharing between organizations, RX further extends the business value of an organization's information.

SPECIFICATIONS

REPORTXTENDER

- Pentium 150 MHz or higher
- 40MB available hard disk space for RX (80MB for installation)
- Up to 700MB available hard disk space for Extraction Wizard to stage one CD
- Memory: 64MB RAM
- Microsoft Windows NT or Windows 2000
- Available parallel port
- CD authoring software/hardware
- LEGATO ApplicationXtender

REPORTXTENDER VIEWER

- Pentium 150 MHz or higher
- 15MB available hard drive space (30MB for installation)
- Microsoft Windows NT, Windows 98 SE and higher (including Windows 2000)
- CD-ROM Drive

REPORTXTENDER DATABASE REINTEGRATION WORKSTATION OR SERVER

- 10MB available hard disk space (20 MB for installation)
- Microsoft Windows NT, Windows 95 and higher (including Windows 2000)
- CD-ROM Drive
- LEGATO ApplicationXtender

FEATURES

SUPPORT FOR MULTIPLE TYPES OF CONTENT

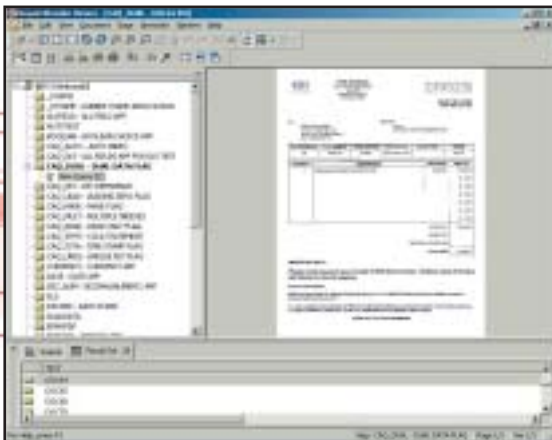

- Text and TIF files viewed natively
- Other file types viewable using appropriate plug-ins

WORKSTATION REINTEGRATION OPTION

- Migrate index and content from multiple CDs to local database
- Provides stand-alone option for access to information
- Designed for content viewing by a single user

SERVER REINTEGRATION OPTION

- Migrate index and content from multiple CDs to networked AX database
- Create new application with migrated content or combine with existing applications
- Designed for content viewing by any user, with AX or RX Read Only Viewer
